HW01 Home Page

http://cis-linux2.temple.edu:8080/SP22_3344_tuj87538/hw1/index.html#/home
From examining my code and the grading rubric, I believe to the best of my ability that I have met the criteria for this homework and should receive full credit of 10.
Peter Bui, Jan 25 at 10:22pm
-0.5 for lack of fluidity when we narrow the browser:
• unwanted wrapping of title

-2 if you submit a zip file AND publish after but within one week of the due date.

-0.5 for poor coding style of code indentation (Source(dropdown menu) -> Format would take care of most of indentation)
Somi J Kim, Jan 26 at 10:19am
+2 no late penalty because student added the course late.
Sally Kyvernitis, Jan 26 at 11:28am
use netbeans menu option Source - Format to keep all your code indented properly (HTML, CSS, JS).
Sally Kyvernitis, Jan 26 at 11:28am
Add "white-space:nowrap" to your title (or titleNav) so that the title does not wrap, get taller, and cover up the top of your content when the browser narrows. It will kick in a horizontal scroll bar which we usually like to avoide but are OK with when the browser is super narrow. You could also reduce font size a bit for your title when in mobile mode, keeping it big when in desktop. Play with it then ask me if you need to.
Sally Kyvernitis, Jan 26 at 11:44am

Fixed All

HW02 JS UI (using NavRouter Provider Style Code)

No comments

HW03 JS Objects

-1: if you did not use a parameter object -0.5: display function not private -0.5 if initial values (per property) were not passed to your make function and used as initial values for your object's properties - for one object
Fixed

HW04 JS Slide Show Component

-1: in slideShowContent, you did not invoke the public method of the objects returned by MakeSlideShow and/or MakeSlideShow did not add a public method to the object that it returns
•missing a public method of your own - setPicNum is a sample

-1: did not demonstrate optional property of input parameter object (when invoking MakeSlideShow from function slideShowContent) -- with and without default value

Fixed all

HW05 JS Click Sort Component

"MakeClickSort" function:
• -3: if clicksortable or filterable but not both (you had sample code for each one – your job was to merge the two samples)

HW06 Tutorial Proposal

-1: late penalty

-1.5: Proposal.pdf does not clearly describe the input parameters to the Make function you are proposing

+1 not very late
+1 for the input

Somi Jeon Kim,
Mar 12 at 6:59pm

HW07 Tutorial Component

-2: late penalty

-1: The object returned by MakeWidget does not have a public method that is invoked by JS code in demo.html

HW08 Database

web_user and user_role table
•-1: missing Data Entry error messages: Duplicate user_role PK and Invalid FK from web_user to user_role

"other" table
• -1: if you don't have one "other" record with null for all user nullable non character fields

I did try to fix this, but every time I tried to change my screenshots in the word and convert to pdf it and then opening the pdf, it kept reverting back to the old pdf but changed the first screen shot. So unfortunately I gave up. (technology was not on my side this day).

HW09 Web API (Server Side Code)

-0.5: Live Web User sort by birthdate does not work.

HW10 React Intro

Formatting/Output
• -1: images not nicely shown in web_user table
•-1: did not right justify numeric values (and column heading) in HTML table
Fixed both
